Abstract (en)

[origin: WO2022266699A1] A stabilised solution or formulation (a liquid or a thixotropic gel) comprising a hypohalous acid and a stabilising amount of dissolved inorganic carbon (DIC), incorporated in the form of carbonic acid or bicarbonate of an alkali or alkaline earth metal, packaged in a double-compartment packaging comprising a flexible container of variable volume therein enclosing the stabilised solution or formulation, said flexible container of variable volume being inserted in a pressure-resistant external container, and comprising carbon dioxide as a pressurised propellant that is capable of exerting pressure on said flexible container of variable volume and forcing said stabilised solution or formulation out of said flexible container of variable volume upon pressing an actuator that is operatively connected to an ejection valve, wherein the flexible container of variable volume enclosing the stabilised solution or formulation is made of polyethylene terephthalate (PET).
