Abstract (en)
[origin: WO2022269400A1] The present invention relates to a supporting device (1) for furniture, adapted to be associated with a panel forming a side (F) of a piece of furniture to adjust its position along an adjusting axis (Y-Y) essentially vertical with respect to a support surface. Said device (1) comprises a mounting element (2) adapted to be associated to an internal surface (F1) of said side (F) and defining an internally threaded through seat, extending along said adjusting axis (Y-Y) and which can be engaged by a threaded rod (31) of an adjusting means (3) adapted to lie with a first end on said support surface and to be axially rotatably operated to adjust, in use, the position of said side (F) with respect to said support surface, said mounting element (2) further comprising at least one coupling portion (21) lying on a first plane (P1), vertical in use, adapted to be placed against said internal surface (F1) of said side (F) and reference means (8) adapted to allow the pre-mounting said mounting element (2) to the side (F). In particular, said reference means (8) comprise at least one pair of reference teeth (23) adapted to be pressure-fitted into the thickness of said side (F) by introducing them from a lower head edge (F2) thereof, said reference teeth (23) lying each on a respective plane (P3) inclined with respect to said first plane (P1).
