Abstract (en)  
[origin: WO2022268470A1] A labelling arrangement (10) for a syringe (1) comprises a label (11) which is designed to be fastened to a syringe body (3) of the syringe (1), and a needle trap (12) which is designed to receive and secure a syringe needle (4) of the syringe (1) after it has been used. The labelling arrangement (10) further comprises a first label flap (13), which is coupled to the needle trap (12), and a second label flap (14) which is separate from the first label flap (13) and which is configured to be severable in a predetermined manner and which is designed to be fastened to a needle protective cap (6) surrounding the syringe needle (4) and to form an opening detection element on the syringe (1). The first and the second label flap (13, 14) are connected to one another by means of the label (11) such that, with respect to an applied state in which the labelling arrangement (10) is operationally mounted on the syringe (1), when opening the syringe (1) by means of removing the needle protective cap (6), the second label flap (14) can be severed and a portion of the second label flap (14), together with the needle protective cap (6), can be removed from the label (11) and the syringe body (3).
