Abstract (en)

[origin: WO2022269152A1] The invention relates to a motor vehicle wheel comprising a radial part connecting a hub to an outer circular contour, and a trim formed by one or more panels (20) fastened to the radial part, these panels (20) having air passages (26) arranged so as to face openings in the radial part, characterized in that the air passages (26) of the panels (20) comprise systems of blades (30) that provide an axial turbine effect during the rotation of the wheel and are fastened to these panels (20) by interlocking.
