Abstract (en)
[origin: WO2022268657A1] The present invention relates to unit dose cleaning composition. The invention particularly relates to tablet composition, and methods of treating surfaces with such compositions. It is an object of the present invention to provide a unit dose composition which releases sequentially ingredients contained therein. It is yet another object of the present invention to provide a unit dose cleaning composition that provides for lowering the amounts of the ingredients in the cleaning composition whilst maintaining the cleaning performance. The present inventors have found that providing a unit dose composition with at least two discrete regions with specific compositions provides for a unit dose composition which achieves good cleaning performance.
