Abstract (en)
[origin: WO2022268922A1] Provided is a security monitoring system keypad for arming/disarming a security monitoring system, the keypad including a set of physical actuators to code a plurality of digits, each actuator coding at least a first and a second of the plurality of digits, wherein each actuator is configured to code the first digit upon receiving a first number of actuations, and to code the second digit upon receiving a second different number of actuations. Also provided is a security monitoring system to secure at least part of a perimeter of premises, the premises including an exterior door giving access to a protected interior space of the premises, the system comprising: a system controller within the protected interior space; and outside the perimeter a keypad device for disarming the security monitoring system, the keypad device including: a set of physical actuators to code a plurality of digits, each actuator coding at least a first and a second of the plurality of digits, wherein each actuator is configured to code the first digit upon receiving a first number of actuations, and to code the second digit upon receiving a second different number of actuations; and a first transceiver to receive control signals from the system controller of the security monitoring system and to transmit to the system controller signals consequent on activation of physical actuators of the keypad.
