Abstract (en)

Transmission device for lock cylinders configured to be installed in a cylinder comprising at least one inner side (1) which comprises a drive by means of a key (3), knob (4) or shaft (5), and one outer side (2). The device comprises a base body (6) with at least one receiving system (7) for an opening or closing signal and a connector element (8) provided with a hole (9) configured to receive therein the key (3), the knob (4) or the shaft (5) of the cylinder. The connector element (8) is linked to the receiving system (7) such that when the receiving system (7) receives an opening or closing signal to open or close the lock, it rotates the connector element (8), rotating with it the key (3), the knob (4) or the shaft (5) of the cylinder, thus opening or closing the lock.
