Abstract (en)
[origin: WO2023274639A1] A tool (100) includes a handle (110) that defines a handle body (111). The tool (100) further includes a trigger (120) that is operatively attached with the handle (110). The trigger (120) is actuatable to different positions to perform one or more actions by the tool (100). The trigger (120) is movable between a first position (P1) and a second position (P2) with the trigger (120) being biased towards the first position (P1). A lock (130) is adapted to lock the trigger (120) at the second position (P2). The tool (100) is characterized in that the lock (130) allows the trigger (120) to selectively lock at one or more locking positions between the first position (P1) and the second position (P2).
