Abstract (en)
[origin: WO2023275731A1] A fencing panel usable, among others, in fencing spans of metal fences in a transverse position, comprising interconnected sections that form a closed profile, wherein the sections are provided with intermeshing bends, characterized in that it has: a longer arm (2.2.) of the front section (2) of a width s1 inclined at an acute angle α relative to the front surface (2.1.), an additional arm (2.3.) of a width s2, and a final arm (2.4.) of a width s3 inclined inwardly at an acute angle β relative to an additional arm (2.3.), wherein the inner surface of the additional arm (2.3.) and the final arm (2.4.) is provided with the bending (P), and more preferably, the bending P of a width s4, which additionally covers a surface of a longer arm (2.2.) from the inside; a shorter arm (2.5.) of a front section (2) of a width s5 provided with an additional arm (2.6.) of a width s6 perpendicular to the shorter arm (2.5.); an arm (3.2.) of a width s7 of a rear section (3) inclined at an obtuse angle γ relative to the rear surface (3.1.) of this section (3), provided with the bending (P), and more preferably, the bending (P) further covers the surface of the rear surface (3.1.) at a width s8 from the inside; a bend (3.3.) of the rear section (3) formed by a double bend forming a pair of walls, an inner wall (3.4.) of a width sg and an outer wall (3.5.) of a width s10, parallel to each other and to the rear surface (3.1.).
