Abstract (en)
[origin: WO2023275447A1] The invention relates to a hydraulic shock absorber (10) comprising: - a compression piston (23) provided with a first fluid-passage groove (28) positioned facing the first leakage passage (19) in a rest position, the compression piston (23) being able to slide radially towards the rod (13) of the main piston (12) under the effect of a fluid pressure during a compression phase in order to progressively close the first leakage passage (19), and - an expansion piston (31) equipped with a second fluid-passage groove (37) positioned facing the second leakage passage (20) when the expansion piston (31) is in a rest position, the expansion piston (31) being able to slide radially towards the rod (13) of the main piston (12) under the effect of a fluid pressure during an expansion phase in order to progressively close the second leakage passage (20).
