Abstract (en)

[origin: WO2023274612A1] A description is given of a mechanically operated clock (2) having a housing, a mechanical movement (2a), arranged in the housing, for driving the clock (2), at least one sensor (4), arranged in the housing, for monitoring the operation of the clock (2), a microchip (3), arranged in the housing, for collecting data recorded by the sensor (4), a communication interface (13) for transmitting the data collected by the microchip to an external device, in particular a smartphone (30), and energy recovery means (8) for recovering energy with which the sensor (4), the microchip (3) and the communication interface (13) are operated.
