Abstract (en)
[origin: EP4113361A1] The invention is a method for managing a smart card (30) comprising an antenna (31) and contact pads (33) and able to communicate with a contactless device (20). The method comprises a step of providing a physical device (10) comprising a first area (11) configured to accommodate the contactless device (20) and a second area (12) configured to house the card, the physical device comprising a first antenna (13) located in the first area, a second antenna (14) located in the second area and a wired bridge (15) linking said first and second antennas, the physical device comprising an energy source (18) configured to power said contact pads (33) of the card when housed in the second area; and in that the method comprises a step of placing the card in said second area (12) and placing the portable device in said first area (11).
