Abstract (en)

[origin: WO2023275486A1] The invention relates to a method for analysing the optical quality of a region of a glazing element, said region being intended to be placed in front of an acquisition or measurement device such as a camera, analysis being performed on the basis of apparent movements of image points. The invention thus relates to a method for calibrating a camera on the basis of said analysis method and to a glazing element thus analyzed.
