Abstract (en)

The invention relates to a signalling assembly comprising a pyramid-shaped main body (1) with at least three side faces (1a, 1b and 1c) and a base (1d) and at least one support joined by the base (1d) when inserted through a housing (2) of the base (1d) of the main body (1). Wherein the signalling assembly is used to signal and make a social problem visible. The signalling assembly (1) is characterised in that it is foldable and in that the three side faces (1a, 1b and 1c) are permanently connected by lateral edges of the side faces (1a, 1b, 1c) and a base (1d) permanently connected to at least one side face (1c) by means of at least one strip (7). Wherein at least one side face (1a) comprises a folding line (10) from the top vertex (V) to the midpoint (M) of the base of the side face (1a).
