Abstract (en)

[origin: WO2023280672A1] In accordance with one or more embodiments herein, an agricultural implement (100) arranged to create a desired tramline pattern as it moves across a field in successive passes is provided. The agricultural implement comprises a plurality of ground engaging tools (120), arranged to be selectively raised from the ground, and a control system for controlling the selective raising of the plurality of ground engaging tools. The control system is arranged to determine, based on the desired tramline pattern, which ground engaging tools should be raised for each pass of the agricultural implement across the field, and control the selective raising of the plurality of ground engaging tools in accordance with this determination for each pass, to thereby create the desired tramline pattern. A corresponding method is also provided.
