Abstract (en)
[origin: WO2023280499A1] A motorcycle case is described, having an inner case part (14), which is fastenable to a motorcycle, and an outer case part (16), which is connected to the inner case part (14) and is movable laterally relative to the inner case part (14). The motorcycle case has a driven gearwheel mechanism (20) coupling the case parts (14, 16), wherein movement of the outer case part (16) relative to the inner case part (14) makes it possible to adjust the width and therefore the storage volume of the motorcycle case (10). The gearwheel mechanism (20) comprises at least one first and one second gearwheel group (34, 36), wherein the gearwheel groups (34, 36) each have at least one spur gear and at least one bevel gear and either the spur gears or the bevel gears of adjacent gearwheel groups (34, 36) mesh.
