Abstract (en)
[origin: WO2023281125A1] Refill System A refillable refill container (100) for the dispensing of a liquid or a granular material product, into a container through a container neck (602). A reservoir (1) for holding the product to be dispensed, defines a flow port (101), and a base (2) for application to the container neck is co-operatively assembled with the reservoir (1) such that the reservoir (1) is reversibly movable relative to the base (2), between application and removal of the base (2) to the container neck, or a filling head of a filling station, from a first relative position in which the flow port is sealed, to a second relative position in which the flow port is open. A method of providing a refillable refill container (100).
