Abstract (en)
[origin: WO2023280969A1] The invention relates to a method for coating a workpiece (11), wherein a coating material (12) is adhered to a surface of the workpiece (11) by means of an adhesive layer (13), having the steps of: defining a model for optimizing at least one target variable, in which the setting of at least one controlled variable on the basis of a plurality of disturbance variables is represented, determining a plurality of disturbance variables which influence the coating operation, and setting at least one controlled variable on the basis of the model and on the basis of the determined disturbance variables, and to a coating device (10) for coating a workpiece (11), and to a computer program for setting up a coating device (10).
