Abstract (en)

[origin: WO2023281184A1] The invention relates to a steering device (140) for a boat propulsion apparatus (100), the propulsion apparatus comprising: - a frame (190) connected to the boat; - an actuator (1) and a flow generator (M1) arranged to propel the boat along a propulsion axis (L); - means (180) for pivoting the flow generator about a steering axis (V1), relative to the frame (190), said steering device comprising gripping means (142), connected at least to the flow generator via said pivoting means; characterised in that the device comprises an offset element (141) arranged between the pivoting means and the gripping means, and pivoting means (143) for gripping along a gripping axis (V2), between the gripping means (142) and the offset element (141), the gripping axis being separate from the vertical plane containing the steering axis (V1) and the propulsion axis (L).
