Abstract (en)  
[origin: WO2023280831A1] An operating device (901) having a main body (902) and an operating element (903), which is rotatably mounted on the main body (902), wherein, for a first type of actuation, the operating element (903) can be rotated and, for a second type of actuation, the operating element (903) can be pushed and/or pulled. The operating element (903) is mounted on the main body (902) by means of an accommodating system (904). The accommodating system (904) comprises two oppositely located upright units (905) and a base element (906), which is arranged between the upright units (905) and is intended for accommodating the operating element (903), and also two connecting members (907). The connecting members (907) couple a respective upright (905) elastically to the base element (906).
