Abstract (en)  
[origin: WO2023280655A1] The invention relates to a sound reinforcement system (400) comprising a loudspeaker (130) and two audio amplifiers (410, 410'), wherein: each audio amplifier (410, 410') is equipped with an output relay (214), which extends to an amplifier output terminal (116) of the associated audio amplifier, as well as a ground output terminal (118); each of two terminals of the loudspeaker (130) is connected to one of the amplifier output terminals; the ground output terminals (118) of the two audio amplifiers (410, 410') are connected to one another and/or to ground. The invention also relates to a method for operating a sound reinforcement system (400) of said type.
