Abstract (en)
The present disclosure provides a sliding board, including a sliding pad and a limiting assembly connected to an end of the sliding pad, wherein the limiting assembly comprises a housing and a connecting member detachably connected to the housing, and the end of the sliding pad is detachably connected to the connecting member. The present disclosure has a simple structure and is easy to operate. When a sliding pad is replaced, only a connecting member inside a housing needs to be removed, so as to achieve the objective of replacing the sliding pad without removing foam. In addition, screws do not need to be exposed, thereby improving the overall aesthetic appearance of a sliding board.
