Abstract (en)  
An illuminating animation device comprising: a housing compartment comprising a base and a film secured together via a wall that extends therebetween, wherein the film includes an image cut therein; a divider secured within the housing compartment, which divides the compartment into a first and second chamber; a printed circuit board secured to the base within the housing compartment, wherein the printed circuit board includes a first and second LED, wherein the first LED is secured within the first chamber and the second LED is secured within the second chamber; a microcontroller unit secured to the base and electrically connected to the printed circuit board; and a power source electrically connected to the microcontroller unit.
