Abstract (en)
The present invention relates to a winding machine for raffia spools intended for obtaining individual spools of a pre-set length starting from a large-volume feed spool. The machine is capable of assembling the two parts that form each spool and subsequently winding the specific number of metres that are preselected. Once the winding process is finished, the machine cuts the rope and secures it to prevent the yarn spool from unravelling to subsequently start a new cycle with a new reel, all in a fully automated manner.
