Abstract (en)

The present invention relates to an accessory system (100) for the interconnection between handles (30, 40) and a corresponding drive mechanism (20), for enclosures such as doors or windows, said system comprising a one-piece metal body in the general form of a plate (10), with a thickness equal to or less than 3 mm, provided with a central passage (11); a first pair of through holes (12) that are diametrically opposite with respect to the central passage (11), at a distance between centres A and provided with an internal threading (12a); and a second pair of through holes (14) that are also diametrically opposite with respect to the central hole (11), at a distance between centres B and aligned with the first pair of holes (12), fulfilling the relationship B>A.
