Abstract (en)

[origin: WO2022263185A1] The invention describes a contact roller assembly for guiding a material web for a winding device, said contact roller assembly comprising: at least one contact roller which is rotatably mounted in at least one support frame; and at least one functional element which is located inside a roller sleeve of the contact roller and which can be moved inside the contact roller and by means of which the material web can be directly or indirectly influenced, the functional element being mounted inside the contact roller. The drive, by means of which a force can be provided for moving the functional element, is located outside the contact roller.
