Abstract (en)
[origin: WO2023285049A1] The present invention relates to a roll arrangement for producing a compressed fibrous material web using a compression press which comprises at least one compression roll and one mating roll and which is designed to compress the fibrous material web in a direction transverse to a conveying direction of the fibrous material web, wherein an elastic tensioning web that receives the fibrous material web is provided, which tensioning web passes through a nip between the compression roll and the mating roll and over the compression roll. The present invention also relates to a corresponding production method.
