Abstract (en)

[origin: WO2023285743A1] The invention relates to a method for producing laminated glazing, comprising at least two sheets of glass bonded to one another by an adhesive interlayer, characterised in that it comprises, prior to the assembly of the laminated glazing, digitally printing a face intended to be on the inside of the laminated structure, at least one of the two glass sheets after the optional forming/curving thereof and/or at least one face of the adhesive interlayer by means of a homogeneous organic ink having a viscosity between 1 and 50 mPa.s comprising 50 to 99% by weight of resin curable under ultraviolet radiation and 0.05 to 20% by weight of diffusing particles, and subsequently curing, by means of UV light, the organic ink; using the laminated glazing obtained by said method as a glazing for a ground, water or air vehicle, or as a glazing for a building.
