Abstract (en)
[origin: WO2023285603A1] The invention relates to a method for the safe operation of a rail transport system (1), comprising the steps of: incorporating a first rail transport information (31) correlating with a state variable of the rail transport system (1), transmitting a second rail transport information (32, 42), which correlates with the state variable of the rail transport system (1), between a first rail vehicle (3) and an infrastructure device (2) and/or a second rail vehicle (4), determining a comparative result based on the first rail transport information (31) and the second rail transport information (32, 42), checking the plausibility of the first rail transport information (31) and/or the second rail transport information (32, 42) based on the comparative result, and controlling the rail transport system (1) based on the result of the plausibility check.
