Abstract (en)  
[origin: CA3220980A1] The invention relates to a method for treating a fluid, which comprises: a step (S31) of introducing the fluid to be treated into an enclosure (225) of a dryer (220); and a step (S32) of drying the fluid in the enclosure (225), including a first phase (B) during which a weight of the enclosure decreases and, when the weight of the enclosure reaches a low threshold or when a rate of variation of the weight of the enclosure is less than a first predefined value, the drying step comprises a complementary step of refilling the enclosure until the weight of the enclosure reaches a high threshold, and a second phase (C) during which the weight of the enclosure decreases and, when the rate of variation of the weight is less than a second predefined value, the method comprises a step (S33) of extracting a solid residue in powder form. The invention also relates to a system for implementing the method.
