Abstract (en)

[origin: WO2023284939A1] Disclosed is a method for ascertaining a force and/or torque acting on a component (100) in a mechanical system by means of a reference element (10) which can be clamped to the component (100) by a first end (12) and the geometry of which and/or the relative position of which to the component (100) is sensed by a sensor unit (20), and the effective force and/or torque is/are determined using an evaluation.
