Abstract (en)

[origin: WO2023284995A1] The invention relates to an automated payment method for a payment from a customer to a seller for a sequence of multiple purchase transactions, wherein the following steps are performed in a seller unit: a) registering the customer for the sequence of multiple purchase transactions; b) receiving items of billing data for each of the purchase transactions, each item comprising a purchase revenue of the purchase transaction; c) checking-out the customer for the sequence of purchase transactions; d) adding up the purchase revenues; and e) generating payment data from the added-up purchase revenues and from payment service provider data of the customer, wherein in step c) the checking-out of the customer triggers at least step e), and the customer is checked out depending on previously stored seller-specific and/or customer-specific checking-out base data, wherein the checking-out is performed automatically by determining in advance a checking-out time at which the checking-out is performed on the basis of the checking-out base data and/or by checking the plausibility of the billing data as a checking-out criterion on the basis of the checking-out base data.
