Abstract (en)
A feeding bottle comprises a silicone container having a neck portion and a base, a teat, an adapter ring for positioning around the neck and a screw ring for fitting over the teat and around the adapter ring for clamping the teat against a top of the neck portion of the container. The screw ring is configured to engage with the adapter ring. The adapter ring is positionable around the neck in either of the two possible up-down orientations. This simplifies assembly for the user.
