Abstract (en)
The invention relates to a static mixer for mixing at least two components of material with one another comprising a housing (3) and a plurality of mixing elements (9, 9', 116, 116') with each mixing element configured to divide each component to be mixed in at least two, preferably more than two, strands of material and further configured to merge said strands of material in layers, with said plurality of mixing elements being arranged along a longitudinal axis (2) of the mixer behind one another, and with said housing covering at least some of the plurality of mixing elements, wherein the mixer further comprises separating means (SM) for separating each component of material into at least two strands of component before entering the plurality of mixing elements.
