Abstract (en)  
[origin: EP4372304A1] A heat exchange element is a heat exchange element formed by stacking a plurality of heat transfer plates (1). The heat transfer plate (1) includes: a heat exchanger (5) that allows air passing through one side in a stacking direction of a plurality of the heat transfer plates (1) and air passing through another side in the stacking direction to pass through in directions facing to each other to cause heat exchange; a header (6a, 6b) provided on one side and another side with the heat exchanger (5) interposed therebetween when viewed along the stacking direction; and a joining edge (25 to 28) provided along a side of the heat exchanger (5) not in contact with the header (6a, 6b). Joining edges (25 to 28) of a plurality of the stacked heat transfer plates (1) are in contact with each other and joined by ultrasonic welding, and the joining edge (25 to 28) is formed with a first convex portion (16) that protrudes along the stacking direction and a concave portion (15) into which the first convex portion (16) of an adjacent heat transfer plate is fitted.
