Abstract (en)  
[origin: WO2023002150A1] An aerosol provision system (1) comprising an aerosolisable material transport element (14) for receiving aerosolisable material to be vaporised. The aerosol provision system (1) is moveable between a first configuration in which at least a portion of the aerosolisable material transport element (14) is uncompressed or partly compressed, and a second configuration in which the portion of the aerosolisable material transport element (14) is compressed by a greater amount than in the first configuration for restricting the formation of vaporised aerosolisable material from the aerosolisable material transport element in the second configuration. The aerosol provision system (1) may comprise a fluid outlet tube (26) which is configured to move between the first configuration and the second configuration for causing the portion (31) of the aerosolisable material transport element (14) to be compressed in the second configuration.
