Abstract (en)
[origin: WO2023002110A1] The invention relates to a buttock support device (1), which comprises a support element (2) made in a single piece and comprising a base portion (3) that is intended to rest on a floor surface (4), a buttock support portion (6) against which a user's buttocks are intended to bear, and an intermediate portion (7) which connects the base portion (3) to the buttock support portion (6), the base portion (3) extending from the side of a front face (FAV) of the intermediate portion (7). The base portion (3) comprises a foot support area (5) on which the user's feet are intended to rest. The buttock support device is elastically deformable between a resting configuration and a support configuration, and is configured to be moved into the support configuration when the user's buttocks bear against the buttock support portion (6) and the user's feet rest on the foot support area (5).
