Abstract (en)  
[origin: WO2022185228A1] The purpose of the invention is to provide a topical composition for the treatment of androgen-dependent dermatoses characterized by the association of one or more bile acids and one or more inhibitors of the 5 alpha reductase enzyme. A composition or formulation comprising one or more inhibitors of 5 alpha reductase and one or more bile acids is useful for the treatment of pathologies linked to androgenic imbalance (androgenic dermatoses) with the ability to limit the side effects of the inhibitors, of 5 alpha reductase and enhance the cytoprotective effects of bile acids.
