Abstract (en)

[origin: WO2023001595A1] The invention relates to a trim assembly (10) for a rear side (12) of a flexible display unit (11) which can be moved between a retracted state and an extended state, the trim assembly (10) having at least two trim parts, which are arranged adjustably between a pushed-together state and a pulled-apart state according to the telescopic principle. According to the invention, the trim parts are each designed as a rigid trim panel (18), are arranged in a plane-parallel manner and are held together in each case in pairs by means of an inner bearing (28), which has guide elements (31) arranged in cut-outs (32) in the trim panels (18), and at the same time are mounted such that they can be displaced plane-parallel to one another along a displacement path (14).
