Abstract (en)
[origin: WO2023002311A1] The invention relates to a machine (10, 110) for handling flexible flat articles, such as hides, fabrics, sheets of flexible material and the like, provided with a manipulator group (11) comprising: - a supporting column (12), developing in a first vertical direction (X1); - a movable horizontal guide (13), developing in a second direction (X2), transverse to the first direction (X1); - vertical translation means (14) for the controlled translation of the movable horizontal guide (13) on the supporting column (12); - two rod-carrying slides (15, 16), each of which placed so as to translate with corresponding first motor means (17) on the movable horizontal guide (13); - two transport rods (18, 19), developing according to a third direction (X3) transverse to the first (X1) and second (X2) directions, each of which mounted on a corresponding rod-carrying slide (15, 16), at least one of the transport rods (18, 19) being rotating around its own main axis by means of second motor means (20).
