Abstract (en)
[origin: WO2023001716A1] The invention relates to a hydraulic rotation damper having a damper housing (10) for use with a fitting, wherein a fluid chamber (16) and a rotor (18) movably arranged in the fluid chamber (16) and comprising at least one fluid displacement body (24a, 24b) are provided in the damper housing (10), the rotor (18) being drivable by means of a coupling contour (26) adapted to the actuator of a fitting, and the coupling contour (26) being provided in a through opening (22) which passes through the damper housing (10). The fluid chamber (16) is arranged completely inside the damper housing (10).
