Abstract (en)

Disclosed in the present invention are a heating assembly and an aerosol generating device. The heating assembly comprises a heating body, a conductive first electrode and a conductive second electrode. The heating body is used for accommodating and heating an aerosol generating substrate during power-on; the first electrode is arranged on an outer side surface of the heating body and has a first connection portion; and the second electrode is arranged, spaced apart from the first electrode, on the outer side surface of the heating body and has a second connecting portion, wherein the first connecting portion and the second connecting portion are located at the same end of the heating body. By means of the heating assembly and the aerosol generating device, a wiring path of a wire can be greatly simplified, the length of the wire can be shortened, and the manufacturing cost and difficulty can be effectively reduced.
