Abstract (en)

[origin: WO2023009527A1] A multiple staple delivery device (10) configured to deliver two or more staples (14, 16) via a release maneuver is disclosed. In at least one embodiment, the multiple staple delivery device (10) may deliver two or more staples (14, 16) simultaneously. The multiple staple delivery device (10) may position at least first and second staples (14, 16) adjacent each other to be positioned into a patient and released via a release maneuver. The release maneuver may be, but is not limited to being, lateral movement, rotary movement, movement of a retention member (60) sufficient to permit release of both the first and second staples (14, 16) and lateral movement, removal of a restraint member (96), and the like.
