Abstract (en)

[origin: WO2023148013A1] The invention relates to a processing machine (01), wherein at least one processing unit (900) in the form of a shaping unit (900) follows at least one processing unit (600) in the form of an application unit (600) in the transport direction (T) of substrate (02), wherein at least one transport unit (700) is arranged between the at least one processing unit (600) in the form of an application unit (600) and the at least one subsequent processing unit (900), the at least one transport unit (700) comprising a plurality of transport elements (701), the transport elements (701) of the plurality of transport elements (701) being arranged one behind the other in the transport direction (T), at least one transport element (701) of the plurality of transport elements (701) being axially adjustable in accordance with the detection of at least one imaging element of a substrate (02) by at least one sensor (704) for substrate alignment. The invention further relates to a method for aligning a substrate (02) in a processing machine (01).
