Abstract (en)

[origin: CN216712260U] The utility model relates to an electrolytic tank, which is designed to be used for generating hydrogen and oxygen from water and comprises two electrodes, namely an anode and a cathode; a proton conducting membrane arranged between the two electrodes as a dielectric, two bipolar plates designed to electrically contact the electrolytic cell; the electrolytic cell is further designed to control the temperature by means of a temperature control device and to control the temperature according to a temperature control section and/or a temperature control plate arranged next to the anode and/or the cathode. The utility model further relates to an electrolysis device pile with the electrolytic tank and an electrolysis system with at least one electrolysis device pile.
