Abstract (en)

[origin: WO2023036418A1] The present disclosure relates to an apparatus, methods, and a computer program for transferring an execution of one or more computational function blocks (20) from a computation device (30a) of a vehicle (100) to a personal device (30b) being coupled with the vehicle, and to a corresponding vehicle and personal device. The apparatus (10) comprises at least one interface (12) for communicating with the computation device of the vehicle and with the personal device. The apparatus comprises one or more processors (14), configured to determine that the personal device is coupled with the vehicle. The one or more processors are configured to select one or more computational function blocks being executed by the computation device of the vehicle. The one or more processors are configured to transfer execution of the one or more selected computational function blocks to the personal device.
