Abstract (en)

A headset comprising a first earcup comprising a first capacitive sensor a second earcup comprising a second capacitive sensor, and a headband comprising a third capacitive sensor. A processor of the headset being configured to receive capacitive information from the first capacitive sensor, the second capacitive sensor, and the third capacitive sensor, to determine whether the first capacitive sensor, the second capacitive sensor, and the third capacitive sensor are capacitively coupled to a user wearing the headset based on the received capacitive information, and to set the headset to a first active mode, if the first capacitive sensor, the second capacitive sensor, and the third capacitive sensor are determined to be capacitively coupled to the user wearing the headset.
