Abstract (en)

[origin: WO2023012360A1] The invention relates to a suction gripper head comprising at least two elementary gripper modules, each module comprising a frame (5) having at least one side provided with at least one opening (8), the two modules being joined together such that a first side (7) provided with at least one opening of the frame of a first module faces a second side (7) provided with at least one opening of the frame of a second module so that gas may pass between the two modules facilitated by the openings on the first side and on the second side, wherein the openings on the first side and on the second side also face each other. The invention also relates to a corresponding module and to a corresponding frame.
