Abstract (en)

[origin: WO2023012128A1] The invention relates to a method (100) for coating containers made of plastic by means of a device for coating containers made of plastic, wherein: the device has at least two processing apparatuses for the containers and at least one pumping apparatus for evacuating containers which are inserted into the processing apparatuses; a container inserted into a processing apparatus is evacuated by means of the pumping apparatus; at least two of the processing apparatuses are combined (102) to form at least one processing group, and the at least one pumping apparatus synchronously evacuates (104) all the containers of the at least one processing group. The invention therefore provides a more efficient method (100) for coating containers made of plastic.
