Abstract (en)

[origin: WO2023010149A1] The invention relates to a device (4) for connecting a fluid-conducting pipe (2) to an additional fluid-conducting element, in particular an additional fluid-conducting pipe (3), comprising a device body (8) which comprises or consists of a multi-layered composite material, wherein the composite material has a polymeric inner layer (9), a polymeric outer layer (10) and a polymeric diffusion barrier layer (11) disposed between the inner layer (9) and the outer layer (10).
